## NOTIFICATION OF STRUCTES

## GEYSER-MARION MILL TO START

Green Reduction Company May Also Tackle the Mine.

**NEW YORK BONANZA AFFAIRS** 

MAMMOTH IS NOW PRODUCING LEAD ORES.

The remodeling of the Geyser-Marion mill at Mercur has been finished, and within the next two or three days or just as soon as Manager Thomas L. Wiswall can marshal his forces, the plant will be started up and kept in continuous operation on the many thousands of tons of tailings contained in the old dumps. It is expected that from 100 to 150 tons of the tailings will be handled daily and that a very close extraction will be obtained.

When questioned yesterday on the report that his company (the Greene Reduction company) contemplated not only the handling of the tailings at the Geyser-Marion, but that it also had in view the opening of the mines again, Colonel Wiswall said the report was not without foundation in fact.

"We shall not undertake the opera tion of the mines right now," said he, "but after we get everything moving all right at the mill it is the intention to thoroughly sample the mines and determine what can be done with the ores. If it is found that the mines can be opened without too much expense and that the ore bodies justify han-dling, there is no doubt, I think, but what something will be done with

It will be remembered that the Green Reduction company began the handling of Geyser-Marien tailings last fall. It was found, however, that many high grade gold and copper rock, as it changes would have to be made in the has done in the past. mill before it could be profitably operated and the plant was closed down. Its remodeling began in June, and now, Manager Wiswall says, every prepara-tion has been made for a successful

Colonel Wiswall is the man who first secured the rights to use the McArthur-Forrest cyaniding process in this country. It was his company that made the original tests on Mercur ores for Gill S. Peyton; it was his company that solved the problem of treating the base ores of that camp and, with the long strides that have been made and experience gained in handling ores from all over the world, Mr. Wiswall feels that the Green company is in a position to tackle most anything that comes

'We don't confine ourselves to straight cyaniding, by any means," said he. "After the contents of an ore has been accurately determined in our laboratories we go to work and determine just what is needed to extract the values. If it is found that other chemicals than cyanide of potassium are needed, they are applied, separately or in conjunction, as the needs of the ore rethe news channels of Boston. If they quire. We are not selling our processes. We take hold of propositions and work them on our own, account. This being the center of the western mining region the center of the center of the western mining region the center of the center of the center e make Salt Lake our headquarters preference to Denver, as formerly, he have many propositions under conderation now, and hope to gradually brokers' letters during the past few months.

NEW YORK BONANZA.

Assessment Formally Made-Man- Twelve Men to Begin Stoping Ore in ager Starts His Policy.

After filing their bonds and oath of office yesterday, the directors of the New York Bonanza Mining company levied an assessment of 3 cents a share on the capital stock of the corporation. It was announced yesterday morning that the assessment had been levied the evening before when the new board or-ganized. The subject was only dis-cussed at that meeting, and the formal action was not taken until yesterday afternoon. The assessment will be deafternoon. The assessment will be de-linquent Oct. 18, and sale day has been set for Oct. 31.
M. J. McGill, the new president and

general manager of the company, stat-ed yesterday afternoon that it was the intention to prosecute development as rapidly as possible. The winze work-ings below the 400-foot level look very promising, and as long as conditions justify it sinking will be continued. Should the winze drop into an ore body of moment or should the showing at any time suggest that exploration of the ledge would give the desired re-sults, then the plan of campaign will be

We want to give the shareholders the best run possible for their money," said Mr. McGill, "and nothing would please me better than to be able to show during the next sixty days that show during the next sixty days that another assessment would not be needed. The levy just made will give us approximately \$9,000. Of that amount fully \$3000 will be owing by the end of the present month. That leaves us with \$6,000 to go on with, and we hope to make it count."

The new offices of the company are legated at No. 12 East Second South

The new offices of the company are located at No. 12 East Second South street, J. H. Deming, formerly cashier of the First National bank of Park City, having consented to serve the company as secretary, while the bank named has been designated as treasurnamed has been designated as treasur-er. J. H. McGill, the new manager, is the master mechanic of the Daly-Judge company. In the past he has done a great deal of work for the New York company and is thoroughly convers-ant with conditions at the property. He has the fullest confidence of all of the Park City shareholders and promises that he will work for the best interests of every shareholder, whether here or of every shareholder, whether here or there or elsewhere.

COWS IN A MINE.

One Falls Down a Winze and Heads

Judge R. N. Baskin returned from a trip to American Fork yesterday morning. He went out to make an inspection of the workings of the Hot Stuff property, in which he is largely interested, but a rather unusual condition of affairs prevented his seeing the particular portion of the mine he went to examine. Describing what had henceped the judge said:

had happened, the judge said: We have a tunnel in a distance of 550 feet. Back from the face about fifty feet the ground is pretty wet, and the men employed at the property of the tunnel and set a tub under it. From the hole nice cold water trickled down and into the tub, from which the supply of drinking water for the cabin was secured. After I had gone some distance into the tunnel, in company with one of the men who had been doing some work in a winze, I noticed dark spots along the floor, and upon holding a candle down, I found that they were cattle tracks.

"We went in to the face of the tunder of t

500 feet into that dark tunnel in order to get water. Coming out to where the winze had been sunk, a distance of 125 feet or so, we stopped. It was

to see what the bottom of the winze looked like that I made the trip. Being unfamiliar with the ladders, I asked the man with me to go down first. He started down, but after going a few feet he called back and said that the winze was filled with something white. He continued on down and when he had gone possibly ing a few feet he called back with said that the winze was filled with something white. He continued on when he had gone possibly down and when he had gone possibly twenty-five feet he discovered that the white object was a cow. The carcass completely filled the hole and made it mpossible for us to get down. I pre-ume that several animals had gotten nto the tunnel at the same time, and n trying to pass, one of them had been crowded out into the winze."

LEAD ORE FROM MAMMOTH. Gold-Copper Mine is Beginning to Shine in a New Light.

The Mammoth Mining company was n the market yesterday with 100 tons of "lead ore"-ore which, though does not run high in the metal named omes under that heading as distincopper ores of other portions of the mine. The lot was sold on controls showing 10.2 per cent lead, 31 ounces silver, 1.6 per cent copper and \$2 in

The fissure from which this class of ore is taken is being steadily devel-oped now, and the showing being made eads to the belief that it is going to be very productive and carry better values than this shipment indicates. Lit tle has been said about the develop-ment of this fissure, Superintendent McIntyre preferring to first thoroughly

The mill, it is expected, will go into ommission tomorrow or next day, so will not be long till high grade concentrates and bullion will begin to make their appearance on the market. The operation of the mill has been made necessary because the management beducing the second-grade ores than by selling them in crude form to the smelters. A treatment charge of \$11 per ton, it was felt, was altogether too much, particularly in a market where no secret was made of the fact that good, clean silicious ore was so desirable. The company will continue o market its lead ores and the very

BOSTON OPERATORS HERE.

Mines and Smelters Are to be Inspected by Them.

J. H. Dalton and J. W. Mattern prominent mining operators of Bostor came in from the east Friday night and will spend several days in visiting the smelters down the valley and taking in the different mines in which they are interested. The visitors are understood to be largely interested in the big copper mines of Bingham, and the Daly-West as well.

They reached the city just at a time

when all the managers of the different smelting works were out of town, but for all that they will be shown every onsideration by the men in charge and their visit, in consequence, pronises to be a most interesting and in structive one. No less cordial will be the reception accorded them at the mines, and it is safe to say that after they have inspected the mills and the mines of the Daly-West company the will have a different 'notion concerning them than they had gained through the news channels of Boston. If the

OASIS IS SHIPPING.

This Property.

Manager J. D. Clive of the Oasis Gold Mining company's property in the old Drum district sends up word to the offices of the company, that he has two carloads of ore headed for market that will be worth approximately \$35 a ton. He found on reaching camp after his vacation that the two carloads were on the dump and ready to ship, so he rustled teams and had the consignment hauled out to the railroads at

Mr. Clive says the mine is looking ine, and he promises to make frequent shipments from now on, as by the 1st of the coming month he expects 100 keep a dozen men working on ore. During his absence from the mine a raisa was made for quite a distance in the shoot which on the 250-foot level showed a width of twenty-six feet. As the raise made gives no indication of having reached the limits of the ore in any direction, he expects to take out a big tonnage from that one point

in the property. The shipment now en route verifying camp sampling, the Oasis stands to make good money from now on, as the ore can be landed at the smelters for about \$7 per ton. Owing to its character, the treatment charges are low.

SPEAKS WELL OF UTAH. Boston Stands For One Utah Mine, Anyhow.

It is rather refreshing to note on this end of the line that one Utah proposi-tion, at least, has defenders in Boston. During the past few days a bear move-During the past few days a bear movement has been started against Utah Consolidated by T. W. Lawson, and he has been called to task for his utterances and charged with having an ulterior motive. Replying to some of his charges, the Bureau steps up and shows what the prospects of the company are for the present year as fol. pany are for the present year, as fol-lows:

pany are for the present year, as follows:

"The Utah company this year should report an output of 14,000,000 pounds of copper produced at a profit of about 8 cents per pound, or total net earnings of \$1,125,000, or nearly \$4 per share. It has already paid \$1.50 per share in dividends this year, and will nay \$2 more in December, or a total of \$1,050,000, which should leave a surplus of \$75,000.

"Stockholders should have no fear as to the future of Utah. The last annual report showed reserves of 1,000,000 tons of ore which had a value of \$7 per ton or \$7,000,000. Lower grade ore not re-

or \$7,000,000. Lower grade ore not reported would greatly increase the reserves. General Manager Channing of the Utah is not a believer in excessive reserves, claiming they increase interest charges unnecessarily.

"The Utah is a demonstrated proper-ty for years to come, demonstrated by ts own workings and those of adjoining properties."

MINING STOCK EXCHANGE. Market Has Been Neglected During

the Week. Business has been practically at a tandstill on the mining exchange during the past week. Nearly all of the trading that was done was in small-priced stocks, so the money involved was insig-nificant in amount. The week previous was considered extremely dull with its record of over \$48,000 worth of trading, but it may be a supersymmetrical with record of over \$48,000 worth of trading, but it appears large when compared with the past six days, when the total was only \$17,789.43, a sum which represents the selling value of 111,788 shares of stock. With so little doing prices, of course, have suffered some, though there has been no apparent disposition to bear the market. Daly-West is back to \$14.10, after crowding \$15 on Monday. May Day, after advancing ta \$14 cents is now around \$1/4 cents, while most of the other stocks dealt in have behaved in a similar manner.

ner. Carisa. Century, Daly Eagle & Blue Bell, Sacramento, Star Consolidated and Tetro have held fairly steady, though with the exception of Sacramento and Star little to nothing has been doing in
